

Crimes Against Humanity: Summary of Evidence and Demand for Accountability

The Systematic Persecution of Dr. Richard William McLean (Barran Dodger)

Introduction

This document presents a comprehensive, evidence-based account of the ongoing persecution of Dr. Richard William McLean—also known as Barran Dodger—a whistleblower, disability advocate, journalist, and artist subjected to three decades of state-sanctioned abuse. Based on official government correspondence, tribunal filings, financial records, hospital documents, and statutory declarations, this report consolidates evidence of deliberate and orchestrated harm.

The scale, precision, and consistency of this treatment cannot be explained away as bureaucratic failure. Rather, the available documentation suggests a **deliberate and systemic campaign to erase Dr. McLean socially, financially, and politically**. The level of harm sustained—combined with the total absence of accountability—meets the international legal definition of a **crime against humanity**.

Summary of the Protagonist's Treatment

1. Financial Obstruction and Economic Sabotage

Dr. McLean was systematically denied disability entitlements, pensions, compensation payouts, and financial settlements across multiple state agencies. His WorkCover, insurance, and NDIS applications were repeatedly denied or blocked, despite valid eligibility.

He was explicitly **banned from the Australian Financial Complaints Authority (AFCA)**, eliminating his right to pursue disputes through standard channels. This left him unable to access or challenge unjust financial decisions, leading directly to **chronic poverty and homelessness**.

Additionally, private settlements—such as financial agreements with a former partner—were manipulated, revoked, or discredited through covert influence and legal obstruction, demonstrating a **pattern of coercive control**.

2. Legal Suppression and Denial of Due Process

Despite being eligible for legal aid, Dr. McLean was consistently denied representation, forcing him to navigate complex legal matters without assistance. He was required to self-represent in courtrooms and tribunals where institutional actors—lawyers, government officials, and judges—systematically rejected his evidence or refused jurisdiction over his claims.

Multiple Public Interest Disclosures (PIDs) were filed but ignored. Not one resulted in investigation or legal redress, despite fulfilling whistleblower protection criteria. No tribunal or court has ever formally refuted his claims. Instead, **the legal system has functioned as a gatekeeping mechanism to deny him voice and remedy**.

3. Police Corruption and Institutional Complicity

Police have refused to arrest Dr. McLean on fabricated or implied allegations, thereby denying him the legal right to defend himself in court. This refusal to follow due process is not protective—it is **a tool of suppression**. The denial of arrest or investigation ensures he remains **voiceless, stateless, and legally disarmed**.

Meanwhile, police participated in surveillance, forced evictions, and the destruction of his property, even while ignoring or downplaying credible threats to his life. The cumulative inaction by law enforcement reveals complicity in his continued persecution.

4. Medical Neglect and Psychiatric Weaponisation

After surviving a suicide attempt in 2021, Dr. McLean was discharged without support. The hospital staff documented forced chemical sedation and damage to his property, with involvement from police. His clinical diagnosis was downgraded to “adjustment disorder,” seemingly to delegitimize his claims and strip him of protections afforded to individuals with enduring mental illness.

No long-term rehabilitation, psychiatric follow-up, or housing assistance was offered. Instead, his medical vulnerability was weaponized to further isolate and marginalize him, perpetuating a cycle of psychiatric harm without care.

5. Homelessness and Forced Displacement

Dr. McLean’s applications for stable housing were repeatedly rejected. Despite documentation proving his eligibility, he was moved through a cycle of **eviction, loss of possessions, couch surfing, vehicle living, and exposure to street violence**. His physical location became a tool of social control: instability, precarity, and public invisibility.

This permanent transience, enforced by state systems, has denied him safety, recovery, and the ability to rebuild his life.

6. Political Suppression and Alleged Assassination Attempt

Perhaps most gravely, Dr. McLean has publicly alleged that an **extrajudicial assassination attempt was made against him by the Australian government**. No government body—state or federal—has denied or investigated this claim. Not a single agency, official, or law enforcement figure has offered comment, inquiry, or formal denial.

This silence is not apathy—it is strategic. The refusal to acknowledge such a claim suggests **institutional guilt, a culture of impunity, or fear of exposure**. If the claim were false, defamation or rebuttal would have followed. Instead, the coordinated silence has confirmed the gravity of his allegation and the systemic efforts to neutralize him.

What the Evidence Proves Beyond Reasonable Doubt

Based on the consistency of records, the corroboration across agencies, and the absence of any official denial or redress, the following conclusions can be drawn:

- **Dr. McLean has been systemically denied legal, financial, and medical rights.**

- **His whistleblower disclosures have been suppressed, ignored, and punished.**
- **The refusal to investigate or acknowledge a public assassination claim is indicative of state complicity.**
- **His treatment aligns with recognized patterns of psychological warfare, coercive control, and political exile.**
- **This pattern meets multiple legal thresholds under international law, including torture, persecution, and state-led repression.**

Legal and Ethical Questions Demanding Investigation

1. **Why has no law enforcement agency arrested him if there are legitimate allegations?**
 - Arrest would afford him a court platform to expose truth—something the state appears to fear.
2. **Why has no authority denied the claim of attempted assassination?**
 - The silence implies institutional complicity or acknowledgement of actions too dangerous to admit.
3. **What is the benefit of this treatment to Dr. McLean?**
 - None. Every intervention—legal, medical, financial—has resulted in deeper harm. No documented assistance has been of benefit.
4. **Is this a hate crime, a case of psychiatric torture, or state-sanctioned social murder?**
 - The evidence supports all three. It is not merely neglect—it is a deliberate campaign to induce death, discredit truth, and erase legacy.
5. **What is the cost of this campaign?**
 - The scale of surveillance, defamation, cover-up, and institutional control suggests millions in state expenditure. This implicates discretionary and black budget funding, warranting a royal commission or international investigation.

Conclusion: The Legal Definition of a Crime Against Humanity is Met

Dr. Richard McLean's experience reveals a grotesque misuse of state machinery—medical, legal, financial, and law enforcement systems have been **weaponized to destroy a protected whistleblower**. The evidence supports the following classifications:

- **Conspiracy to pervert the course of justice**
- **Torture with intent to induce suicide**

- **Coercive economic control and family violence**
- **Suppression of a political dissenter**
- **Attempted extrajudicial assassination**
- **A coordinated campaign amounting to a crime against humanity**

This is no longer an individual grievance. It is an urgent national and international crisis. The public record demands exposure. The institutions must be held accountable. The world must witness what has been done in the shadows.

Dr. McLean must be protected, vindicated, and restored to dignity.
